

## CLAIMS

1. A chair accessory device comprising:

first and second tote bags, each bag including inner and outer panels;

a coupling panel having opposed first and second ends coupling the bags together,

the first end coupled with the inner panel of the first bag, and the second end

coupled with the inner panel of the second bag; and

bag attachment structure for selectively securing the first and second bags in close proximity to each other.

2. The device as set forth in claim 1, wherein the bag attachment structure includes hook material fastened to one of the first and second bags and loop material fastened to the other of the first and second bags.

3. The device as set forth in claim 1, wherein the bag attachment structure includes hook material fastened to one of the first and second ends of the coupling panel, and loop material fastened to the other of the first and second ends.

4. The device as set forth in claim 1, the first bag further including a first shoulder strap attached thereto, and the second bag further including a second shoulder strap attached thereto.

5. The device as set forth in claim 4, the device further including strap attaching structure for selectively attaching the first and second straps to each other.

6. The device as set forth in claim 5, wherein the strap attaching structure includes hook material fastened to one of the first and second straps, and loop material fastened to the other of the first and second straps.

7. The device as set forth in claim 1, the device further including a first handle attached to the first bag, and a second handle attached to the second bag.

5 8. The device as set forth in claim 7, the device further including handle attaching structure for selectively attaching the first and second handles to each other.

9. The device as set forth in claim 8, wherein the handle attaching structure includes hook material fastened to one of the first and second handles, and loop material fastened to the other of the first and second handles.

10. A chair accessory device comprising:  
first and second tote bags, each bag including inner and outer panels;  
a coupling panel having first and second ends for coupling the first and second bags  
together, the first end coupled with the inner panel of the first bag, and the  
5 second end coupled with the inner panel of the second bag; and  
a first shoulder strap coupled with the first bag and a second shoulder strap coupled  
with the second bag.

11. The device as set forth in claim 10, the device further including bag attachment  
10 structure for selectively attaching the first and second bags in close proximity to each other.

12. The device as set forth in claim 11, wherein the bag attachment structure  
includes hook material fastened to one of the first and second bags and loop material  
fastened to the other of the first and second bags.

13. The device as set forth in claim 11, wherein the bag attachment structure  
includes hook material fastened to one of the first and second ends of the coupling panel, and  
loop material fastened to the other of the first and second ends.

14. The device as set forth in claim 10, the device further including strap attaching  
20 structure for selectively attaching the first and second straps to each other.

15. The device as set forth in claim 14, wherein the strap attaching structure  
includes hook material fastened to one of the first and second straps, and loop material  
25 fastened to the other of the first and second straps.

16. The device as set forth in claim 10, the device further including a first handle  
attached to the first bag, and a second handle attached to the second bag.

17. The device as set forth in claim 16, the device further including handle attaching structure for selectively attaching the first and second handles to each other.

5 18. The device as set forth in claim 17, wherein the handle attaching structure includes hook material fastened to one of the first and second handles, and loop material fastened to the other of the first and second handles.

19. A chair accessory device comprising:  
first and second tote bags, each bag including inner and outer panels;  
a coupling panel having opposed first and second ends coupling the bags together,  
the first end coupled with the inner panel of the first bag, and the second end  
coupled with the inner panel of the second bag;  
a first shoulder strap coupled with the first bag and a second shoulder strap coupled  
with the second bag; and  
bag attachment structure for selectively securing the first and second bags in close  
proximity to each other.

20. The device as set forth in claim 19, wherein the bag attachment structure  
includes hook material fastened to one of the first and second ends of the coupling panel, and  
loop material fastened to the other of the first and second ends.
